## SISTEMA DE ILUMINACIÓN MODULAR

Cada módulo (figura A) está preparado para conectarse con el anterior y gracias a su forma permite innumerables combinaciones sólo limitadas por la imaginación del proyectista. Los cristales están diseñados para poder crear un ritmo estético en la luminaria dependiendo de los gustos del cliente. Sólo es necesario un punto de luz para crear una cadena infinita de luminarias. También hay un tramo ciego para poder hacer separaciones de luz, que igualmente se interconecta eléctricamente.

### Modular lighting system

*Each module (figure A) is designed to be connected to the previous one and due to its shape, allows countless combinations limited only by the imagination of the designer. The glasses are designed to create an aesthetic pace according to the customer taste. You only need one power supply to create an endless chain of lights. There is also a blind stretch to make separations of light, which is also electrically interconnected.*
